Monday digest: Medical Director, North

Monday 2026-05-04. 11 clinics. Latest complete week starts 2026-04-27. Ops partner: Regional Ops Partner, North.

About 8 minutes to read. Sources and hidden items are on the live page.

One thing today

Call Regional Ops Partner, North about Clinic 06 staffing. Call outs were 9 for 2 weeks running. Scheduled doctor hours went down 18 percent. See item 2. Check back Monday May 11.

At a glance

106 center and metric pairs were hidden this week. The list and the reason for each are on the live page.

1. Clinic 11: record completion below its norm 11 weeks running. Yours. Check back May 11.
2. Clinic 06: call outs at 9, up 8 weeks running. Ops partner. Check back May 11.
3. Clinic 05: recheck compliance 13.1 points below peers; one doctor at 41.6. Yours. Check back May 18.
4. Clinic 09: callbacks at the ceiling, verify the logging. Ops partner. Check back May 11.
5. Clinic 07: call outs at 5, up 2 weeks running. Ops partner. Check back May 11.

Last week's items (2026-04-27): 1 Clinic 11 Record completion within 24h · 2 Clinic 06 Staff call outs · 3 Clinic 05 Recheck compliance · 4 Clinic 09 Callback compliance. A tick marks one that is no longer above the line.

Item 1: Clinic 11: record completion below its norm 11 weeks running

What happened. Record completion was 93.3 in February and 79.7 last week. Its long run average is 92.1. At the same time, throughput rose from 2.66 to 2.98. All 4 of 4 doctors fell. Visits did not get meaningfully shorter: 27.3 minutes in the 8 weeks before plan AP_009 opened, 27.0 minutes over the last 8 weeks, a change of 0.3 minutes shorter.

Why it matters. 90 of 441 records were not closed within 24 hours last week.

What to do. Hold one center conversation on changes since February, not per doctor. This one is yours (medical). Check back Monday May 11.

This would have surfaced on 2026-02-16, 10 Mondays before the latest complete week.

Week	Record completion within 24h
2026-02-09	93.3
2026-02-23	86.2
2026-03-16	82.1
2026-04-06	74.2
2026-04-27	79.7

Doctor	Record completion, first 8 weeks	Last 8 weeks
DVM_0046	93.0	79.5
DVM_0047	91.3	78.3
DVM_0048	90.6	77.9
DVM_0049	92.9	80.5

Plan AP_001 (data disagrees): marked on track; data shows 77.3 against a target of 94.0, and falling.

Plan AP_009 (target met at open): marked complete; the target of 2.52 was already met when it opened (2.66).

Item 2: Clinic 06: call outs at 9, up 8 weeks running

What happened. Call outs over the last 4 weeks were 4, 7, 9, 9. Before March, the median was 1. Scheduled doctor hours went down 18 percent, from 171.1 to 140.0.

Why it matters. Completed appointments went down 17 percent, from 419 to 348.

What to do. Ask for a cover plan for Clinic 06 call outs. This one is Regional Ops Partner, North's (ops). Check back Monday May 11.

This would have surfaced on 2026-03-23, 5 Mondays before the latest complete week.

Plan AP_003 (stalled): marked at risk. Due 2026-04-19, 2 weeks ago. The gap to target is 9 percent wider than when the plan opened.

Plan AP_024 (target met at open): marked on track; the target of 74.6 was already met when it opened (81.6).

Item 3: Clinic 05: recheck compliance 13.1 points below peers; one doctor at 41.6

What happened. DVM_0024's record completion is 90.4, above peers at 87.6. Recheck is the gap: 41.6 against 72.7 for the other doctors.

Why it matters. If DVM_0024 matched the other Clinic 05 doctors, the clinic would reach 72.7, still 15.3 points short of the 88.0 target.

What to do. Coach DVM_0024 on recheck booking. The clinic wide session is in Opportunity. This one is yours (medical). Check back Monday May 18.

This would have surfaced on 2025-12-22, 18 Mondays before the latest complete week.

Doctor	Type	Tenure months	Hours, 8 weeks	Recheck, hours weighted
DVM_0024	full time	89	184.5	41.6
DVM_0020	full time	33	289.9	64.3
DVM_0021	full time	91	225.9	71.6
DVM_0022	full time	80	232.4	75.3
DVM_0023	full time	22	295.8	79.7

Plan AP_002 (stalled): marked on track; 10 percent of the gap closed with 65 percent of the time gone.

Item 4: Clinic 09: callbacks at the ceiling, verify the logging

What happened. Callback compliance was 100.0 last week. It sat at or above 99.5 in 9 of 10 weeks. Treat it as a number to verify.

Why it matters. Required callback count is not in the data, so the panel cannot check a ceiling rate. Small centers can reach it.

What to do. Pull the Clinic 09 callback log for one week. This one is Regional Ops Partner, North's. The metric is medical; the task is operations. Check back Monday May 11.

This would have surfaced on 2025-11-10, 24 Mondays before the latest complete week.

Also moving here: recheck compliance 73.3 on the 8 week average, peer median 81.1.

Item 5: Clinic 07: call outs at 5, up 2 weeks running

What happened. Call outs went from 3 to 5. The long run average is 1.0. Clinic 07 opened on 2025-12-05, with 22 weeks of data.

Why it matters. Appointments were 175 against a 8 week average of 178.9. Wait was 11.0 minutes against 10.6 minutes. Nothing downstream has moved yet.

What to do. Ask Clinic 07 what is driving the rise in call outs. This one is Regional Ops Partner, North's (ops). Check back Monday May 11.

First surfaced this week.

Also moving here: open doctor requisitions 1.2 on the 8 week average, peer median 0.2.

Plan check

Across Northside Clinic Network, 10 of the 26 plans with data at open had already met their target when they opened, and 3 of the 28 plans track as reported without a flag.

Close: Clinic 10 throughput (AP_019). Close and re-set: Clinic 10 callbacks (AP_004), Clinic 02 client satisfaction (AP_007), Clinic 11 throughput (AP_009), Clinic 06 recheck compliance (AP_024). Challenge: Clinic 11 record completion (AP_001), Clinic 05 recheck compliance (AP_002), Clinic 06 wait time (AP_003). Too early to judge: Clinic 03 recheck compliance (AP_020), Clinic 07 throughput (AP_027).

Plan	Center	Metric	Status	Label	4 week actual vs target	Action
AP_001	Clinic 11	Record completion within 24h	on track	data disagrees	77.3 vs 94.0	Update the status to match the data, or flag the data as wrong.
AP_002	Clinic 05	Recheck compliance	on track	stalled	68.2 vs 88.0	Change the approach or close it.
AP_003	Clinic 06	Average wait time	at risk	stalled	9.1 vs 7.0	Change the approach or close it.
AP_004	Clinic 10	Callback compliance	on track	target met at open	90.3 vs 88.0	Close it. If the metric still needs to move, re-open with a target set from the panel.
AP_007	Clinic 02	Client satisfaction	on track	target met at open	4.80 vs 4.55	Close it. If the metric still needs to move, re-open with a target set from the panel. Check the linked metric first.
AP_009	Clinic 11	Throughput per doctor hour	complete	target met at open	2.95 vs 2.52	Close it. If the metric still needs to move, re-open with a target set from the panel. Check the linked metric first.
AP_019	Clinic 10	Throughput per doctor hour	on track	done	2.56 vs 2.33	Close it.
AP_020	Clinic 03	Recheck compliance	on track	too soon to judge	76.7 vs 78.6	Too soon to judge. Note the direction.

Plan	Center	Metric	Status	Label	4 week actual vs target	Action
AP_024	Clinic 06	Recheck compliance	on track	target met at open	82.2 vs 74.6	Close it. If the metric still needs to move, re-open with a target set from the panel.
AP_027	Clinic 07	Throughput per doctor hour	on track	too soon to judge	2.28 vs 2.72	Too soon to judge. Note the direction.

Opportunity

Clinic 01 recheck compliance: 88.9 last week, 88.0 over 8 weeks, 20.0 points above Clinic 05's 68.0. Held 6 of 6 weeks above its own long run average, and above the median of the other 10 centers. Needed by Clinic 05, Clinic 09.

Set one peer session: Clinic 05's medical lead with Clinic 01's, on how rechecks get booked before the client leaves (recheck scheduled before the client left).

Watching and suppressed

- Membership conversion, all 11 centers: definition changed 2026-02-09, not ranked.
- Clinic 07 client satisfaction: watch. 3.54 on 7 responses last week, 4.31 on 39 over 4 weeks.
- Throughput, revenue and no shows at Clinic 10 (18 weeks) and Clinic 07 (22 weeks): ramp, under 26 weeks of history.

Feedback

Reply useful, not useful, already handled under each item above. In this demo a reply shows the rule it would trigger and is not sent anywhere. In the real digest each reply lands in feedback/feedback.csv and moves the line that item has to clear next week.

How it works

1. Code computes every number, ranks every center and metric, and labels every plan.
2. The model writes 16 short passages from placeholders. It never sees a digit.
3. A validator rejects any digit not in the facts file, any banned word, and any restated line.
4. A person approves the run. The approved run is what you are reading.
5. What a Monday costs: $0.45 in model calls for this run ($0.4514 exact), at list price.
6. To check any number: open Show all the detail and click its E number. The appendix names the file, the column, the center and the week.
7. To rerun the numbers: python -m src.run --stage digest --cached, from the repo, no API key. To rewrite the words, drop --cached; this run cost $0.45. A test suite runs before every commit.
8. What it needs each week: the four CSVs. Four leaders for a year at this run's rate: about $94 in model calls.

The repository holds the pipeline, the prompts, the tests, the data generator and every output: github.com/stevon-squadtrip/ops-digest-demo.

This page is static. It makes no network call, keeps no cookie, and records nothing about you.

Appendix

Other movements

- Clinic 02 callbacks: 91.8 last week, 8 week average 86.8, long run average 85.2 (favorable, improving).
- Clinic 04 recheck compliance: 79.5 last week, 8 week average 81.4, long run average 80.6 (adverse, last week).
- Clinic 03 no shows: 52 last week, 8 week average 35.0, long run average 31.6 (adverse, last week).
- Clinic 02 throughput: 2.44 last week, 8 week average 2.50, long run average 2.60 (adverse, slow drift).

Data notes

- 14 of 26 recorded plan baselines are off by more than that center's normal week to week swing.
- No center level owner exists in the data. Every plan in this span lists the Medical Director. A clinic lead field would let actions route below them.
- 9 duplicate rows removed from clinic_weekly.
- 11 negative wait times treated as missing.
- Maturity tier recomputed from opened_date: 7 centers differ from the recorded tier (Clinic 02, Clinic 04, Clinic 05, Clinic 06, Clinic 08, Clinic 09, Clinic 10).
- 7 centers carry a state code that disagrees with their metro. Not used by any metric.
- Doctor FTE target oddities: Clinic 09: 4 rooms, 6.4 FTE (1.6 per room), Clinic 11: 7 rooms, 2.7 FTE (0.39 per room).
- Clinic 09 callbacks at or above 99.5 in 9 of the last 10 weeks: logged as a data integrity question, not as performance.
